

Evaluation kit software

This CD-ROM contains the software needed to operate the DALSA CCD evaluation kit via the USB interface.

It also contains a Photoshop Plugin for converting raw images to RGB images. Please use the "read me" file in the Photoshop Plugin folder for correct installation and use.

Step 1: Installation of the cypress uP driver.

Plug in the USB device,

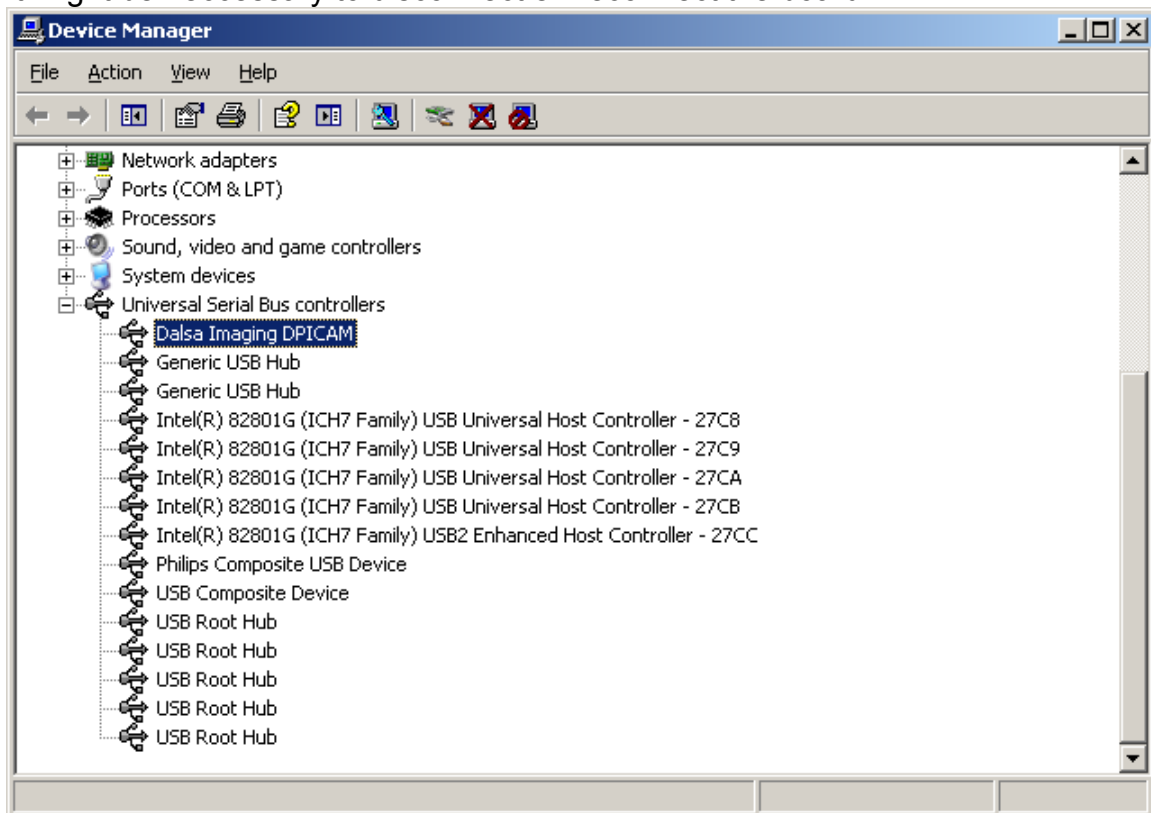

When windows finds new hardware select the driver manually:

CD-ROM\Software\Cypress\Driver_CyUsb\x32\DPICAM

Follow install procedure.

You can see the device in the device manager:

It might be necessary to disconnect en reconnect the board.

Step 2: Installation of CamControl

Start the setup.exe in CamControl folder on the CD-ROM

CD-ROM\Software\CamControl

You will be asked to reboot your system

After rebooting you can start CamControl from the windows start menu. It can be un-installed using the control panel

Step 3: Copy configuration files

In order to use the evaluation kit a configuration file must be loaded. It is best to copy the configuration files from this CD-ROM to your local harddisk.

Configuration files can be found on the CD-ROM.

Also frame grabber configuration files for Coreco frame grabbers will be added.
